Dear Yash Sud,

We hope you're doing well.

Thank you for your interest in the **AI / ML Engineer Intern (LLM & Agentic AI)** position at **Horrazon AI**.

After carefully reviewing your application, resume, technical background, projects, and overall engineering profile, we are pleased to inform you that you have been **shortlisted for Round II** of our hiring process.

Congratulations!

As part of this round, we would like to evaluate your engineering approach, system design skills, AI engineering knowledge, and your ability to build production-oriented AI systems. Instead of a conventional coding test, this round simulates a real-world engineering engagement similar to the work carried out by our AI Engineering team. The assessment details are provided in the attached **AI Engineering Challenge** document.

Round II: AI Engineering Challenge

Assessment Duration: **36 Hours** (starting from the time this email is sent)

Please read the attached assessment document carefully before beginning. It contains:

- Complete problem statement
- Business scenario
- Functional requirements
- Technical expectations
- Deliverables
- Evaluation methodology

- Timeline
- Frequently Asked Questions

The challenge has been designed to assess **engineering thinking** rather than framework familiarity, and you are encouraged to make thoughtful technical decisions throughout your implementation.

Resources You May Use

You are free to use any appropriate resources during the assessment, including:

- Official documentation
- Open-source libraries and frameworks
- Research papers
- Stack Overflow
- GitHub documentation
- AI coding assistants such as:
 - Claude
 - ChatGPT
 - GitHub Copilot
 - Cursor
 - Gemini
 - Perplexity

Using AI tools is **permitted**. However, you are expected to **understand, explain, and defend** every technical decision made in your solution. During the subsequent interview, you may be asked to explain or modify parts of your implementation.

Submission Requirements

Please submit your complete solution within **36 hours** by emailing the following to:

 careers@horrazon.in

Your submission should include:

- GitHub Repository Link
- README
- Architecture Diagram
- Docker Configuration
- Design Decisions Document

- Working Demo Video (5–10 minutes)
- Any additional supporting documentation (if applicable)

Email Subject:

Round II Submission – AI Engineering Challenge – [Your Full Name]

Important Notes

- Submit only your own work.
- Ensure your project runs successfully using the provided setup instructions.
- Clearly document any assumptions, limitations, or incomplete features in your README.
- We value **engineering quality, architecture, reasoning, and documentation** more than the number of features implemented.
- Late submissions may not be reviewed unless a delay has been communicated and agreed upon in advance.

Following the evaluation of your submission, shortlisted candidates will be invited to a **technical discussion**, where you'll walk us through your architecture, explain your engineering decisions, and discuss potential improvements and trade-offs.

We appreciate the time and effort required for this assessment and look forward to reviewing your solution.

We wish you the very best and are excited to see what you build.

Warm regards,

**Talent Acquisition Team****HORRAZON INTELLIGENCE PVT. LTD.** careers@horrazon.in horrazon.com linkedin.com/company/horrazon
